Operational Risks

The following business risks are implied by the current governance posture. These are not hypothetical — they are deterministic consequences of the metric gaps identified above.

Risk	Severity	Description
Duplicate Orders & Conflicting...	Critical	SUGGESTED: 7 cross-source collision(s) mean the same business concept is defi...
Migration Delays	High	SUGGESTED: Migration readiness is 57%. Significant manual mapping effort will ...

Phase 1: Critical Actions

These items represent the highest-risk governance gaps that should be addressed immediately. Critical cross-source collisions and unmapped core tables can cause data integrity failures during migration or consolidation.

#1 — Cross-Source Collision Resolution

Critical

Category Cross-Source Collision Resolution
Affected Items 6

Item
Item ID
Effort Medium (6-20 items)
Impact Score 0.95
Expected Outcome Eliminates critical cross-source definition conflict; improves definition cor

SUGGESTED: Resolve critical collision for "Item ID" — 6 fields across 3 sources have conflicting definitions. Establish a single authoritative definition and reconcile all source mappings.

#2 — Cross-Source Collision Resolution

Critical

Category Cross-Source Collision Resolution
Affected Items 3

Item
Sales Order ID
Effort Small (<=5 items)
Impact Score 0.92
Expected Outcome Eliminates critical cross-source definition conflict; improves definition cor

SUGGESTED: Resolve critical collision for "Sales Order ID" — 3 fields across 2 sources have conflicting definitions. Establish a single authoritative definition and reconcile all source mappings.

#3 — Cross-Source Collision Resolution

Critical

Category Cross-Source Collision Resolution
Affected Items 2

Item
Quantity
Effort Small (<=5 items)
Impact Score 0.90
Expected Outcome Eliminates critical cross-source definition conflict; improves definition cor

SUGGESTED: Resolve critical collision for "Quantity" — 2 fields across 2 sources have conflicting definitions. Establish a single authoritative definition and reconcile all source mappings.

#4 — Cross-Source Collision Resolution

Critical

Category Cross-Source Collision Resolution
Affected Items 2

Item
Work Order ID
Effort Small (<=5 items)
Impact Score 0.90

Expected Outcome Eliminates critical cross-source definition conflict; improves definition cor

SUGGESTED: Resolve critical collision for "Work Order ID" — 2 fields across 2 sources have conflicting definitions. Establish a single authoritative definition and reconcile all source mappings.

#5 — Cross-Source Collision Resolution

Critical

Category Cross-Source Collision Resolution

Affected Items 2

Item

Order Date

Effort Small (<=5 items)

Impact Score 0.90

Expected Outcome Eliminates critical cross-source definition conflict; improves definition cor

SUGGESTED: Resolve critical collision for "Order Date" — 2 fields across 2 sources have conflicting definitions. Establish a single authoritative definition and reconcile all source mappings.

#6 — Cross-Source Collision Resolution

Critical

Category Cross-Source Collision Resolution

Affected Items 2

Item

Quantity Used

Effort Small (<=5 items)

Impact Score 0.90

Expected Outcome Eliminates critical cross-source definition conflict; improves definition cor

SUGGESTED: Resolve critical collision for "Quantity Used" — 2 fields across 2 sources have conflicting definitions. Establish a single authoritative definition and reconcile all source mappings.

#7 — Cross-Source Collision Resolution

Critical

Category Cross-Source Collision Resolution

Affected Items 2

Item

Supplier Name

Effort Small (<=5 items)

Impact Score 0.90

Expected Outcome Eliminates critical cross-source definition conflict; improves definition cor

SUGGESTED: Resolve critical collision for "Supplier Name" — 2 fields across 2 sources have conflicting definitions. Establish a single authoritative definition and reconcile all source mappings.

Phase 2: High Priority Actions

High-priority items address significant coverage gaps and definition conflicts that degrade overall governance quality. Resolving these will materially improve the governance score.

#8 — Taxonomy Assignment

Medium

Category	Taxonomy Assignment
Affected Items	24
Effort	Large (>20 items)
Impact Score	0.75
Expected Outcome	Raises ownership clarity toward 100%; enables department-level reporti

SUGGESTED: Assign taxonomy groups to unclassified tables — 24 labeled fields have no department ownership. Ownership clarity is at 66.7%. Classify these into appropriate business departments.

Phase 4: Migration Prep Actions

Migration preparation items ensure the data landscape is fully mapped and validated before automated migration tools like Ragnarok are engaged. These reduce the risk of migration errors.

#9 — Ragnarok Hint Coverage

Low

Category	Ragnarok Hint Coverage
Affected Items	6
Effort	Medium (6-20 items)
Impact Score	0.30
Expected Outcome	Increases migration readiness score; enables automated table mapping in

SUGGESTED: Increase Ragnarok target hint coverage — currently 66.7% (12 of 18 tables have hints). Add target table hints to the remaining 6 tables to improve migration automation accuracy.

#10 — Orphan Table Investigation

Low

Category	Orphan Table Investigation
Affected Items	2
Effort	Small (<=5 items)
Impact Score	0.25
Expected Outcome	Clarifies migration scope; reduces risk of migrating obsolete data

SUGGESTED: Investigate 2 orphan tables — these tables have no foreign key relationships and may represent unused legacy structures, staging tables, or improperly linked entities. Determine if they should be included in migration scope.

Methodology

All action items in this plan are derived deterministically from explicit metric thresholds computed by the Ratatosk governance engine. No probabilistic inference, machine learning, or AI models are used. Each action item traces directly to a specific governance metric and threshold condition.

Scoring Reference:

Metric	Formula	Weight
Coverage	$\text{labeledFields} / \text{totalFields}$	30%
Consistency	$1 - (\text{collisions} / \text{uniqueLabels})$	25%
Readiness	$\text{composite}(\text{hintCoverage}, \text{confidence}, \text{criticalTableCoverage})$	25%
Ownership	$1 - (\text{unownedLabeled} / \text{labeledFields})$	20%

Impact Score = $\text{base}(\text{phase}) + \min(0.15, 0.05 * \ln(1 + \text{count})) + \text{cross_source_bonus}(0.05) + \text{cross_dept_bonus}(0.03)$. Effort: Small (≤ 5), Medium (6-20), Large (> 20).
