

Mimir Labs

The ERP that doesn't believe in edge cases.

Ratatosk discovers where enterprise meaning breaks. Yggdrasil ERP turns governed meaning into enforceable operational state.

Investor Deck

Pre-seed investor materials — Mimir Labs LLC, South Central Pennsylvania.

Enterprise systems fail at the same thing, the same way, for thirty years.

Gartner: over 70% of recent ERP initiatives miss their original business case goals. The system of record can't be trusted because the data model drifts every time anyone customizes anything.

What's in place today

- ERP, CRM, BI, spreadsheets
- iPaaS and workflow glue
- Custom fields and bespoke logic
- Audit trails as aspiration

Why it breaks

- Duplicate business concepts
- Conflicting ownership
- Ambiguous state transitions
- Decision authority outside the system

Compounding cost

- Each customization deepens drift
- Audits become archaeology
- Migrations stall mid-project
- AI built on this surface multiplies wrong answers

Context is not authority.

The missing layer: governed operational authority

Three conditions every governable ERP must satisfy. We built each one in running code.

Canonical meaning

- 323 tables across 10 modules
- Mimirbrunnr shared semantic model
- No custom fields, ever
- Tenant label overrides without schema drift

Validated state

- State Constraint Engine on every transition
- Append-only audit log with per-field deltas
- Replayable RedPanda event mesh
- Tenant-scoped predicates and approvals

Signed authority

- OPE Policies compile to runtime constraints
- Draft → sign → active → amend → supersede
- No-delete principle preserves the audit trail
- Standard Library: SOX, AS9100, CMMC, ITAR, ...

All three layers are running C++ code as of May 2026. This is built, not planned.

Ratatosk is the wedge

A short-cycle diagnostic that exposes semantic drift and authority conflicts before implementation hardens them.

Ratatosk is built and ready to sell. \$5–12.5K workshop fee, credits 1:1 against Yggdrasil activation.

Ratatask produces the artifacts every implementation wishes it had earlier

A canonical map before migration, integration, compliance, or AI deployment.

Executive Governance Summary

Board/CIO view of structural risk and priority actions

Taxonomy Distribution

Where data structures concentrate by domain and business concept

Governance Usage Map

Which systems use which concepts and where ownership is unclear

Conflict & Redundancy Report

Duplicate, overlapping, or contradictory enterprise meanings

Canonical Governance Manifest

Machine-readable authority map for downstream implementation

Data Ecosystem Map

Operational system topology and integration risk surface

The manifest becomes the bridge into Yggdrasil ERP, OPE, migration, synchronization, and partner delivery.

Platform shape: discovery first, authority next

The new deck centers on Ratatosk as the entry point and Yggdrasil ERP as the governed reference implementation.

Each tool ships standalone. One shared semantic substrate (Mimisbrunnr) unifies the six.

Yggdrasil ERP: the reference implementation

A governance-first ERP designed around canonical meaning, state validity, and auditability. A reference implementation of the CAIP-HE framework.

Core design principles

- Qt 6 desktop client + Next.js web app, both shipping in alpha
- Canonical schema (323 tables, 10 modules) as living substrate
- Strict validation at ingress; no custom fields permitted
- OPE-signed Policies enforced on every state transition
- Append-only audit log; RedPanda B2B event mesh

Why it matters now

- Manufacturers can't trust their own data after years of customization
- AS9100, CMMC, SOX, ITAR demand provenance, not screenshots
- AI built on drifted data multiplies bad decisions
- Substrate-level governance is the only durable fix

Yggdrasil ERP is the working reference implementation of the CAIP-HE framework — built, running, and shipping in alpha today.

OPE makes the thesis visible

Operational Policy Enforcement: signed administrative decisions compile to runtime constraints, roles, approval flows, and workflow templates. Shipped May 2026.

Today

- Board minutes
- Email approvals
- Policy PDFs
- Teams threads
- Tribal memory

OPE Policy

- Compound predicates (AND/OR/NOT/IF-THE N)
- Named Conditions library (versioned)
- Policy Phases (pre / gate / post / observer)
- Multi-action THEN + JSONB capture
- Signed lifecycle: draft → active → superseded

Runtime effect

- Allowed
- Blocked
- Routed
- Escalated
- Audited (per-field)

Eight Standard Library templates ship today across SOX, AS9100, AS9102, ISO 9001, CMMC, and OFAC. Mimirbrunnr carries the controls vocabulary.

Norn: contract document intelligence today, OPE-integrated tomorrow

Standalone pilot offering now (Business tier). Roadmap: contract obligations become OPE Policy candidates the Yggdrasil runtime enforces directly.

Today

- Contract authoring + signing
- Pilot tier: \$299/mo Business
- 5-org pilot cap (none signed)
- Standalone web app

Norn extraction

- Obligations
- Evidence requirements
- Milestones
- Renewals and exceptions

Roadmap → OPE

- Obligations → Policy candidates
- Evidence → Constraint inputs
- Milestones → Workflow templates
- Renewals → Effective-date triggers

Google and Microsoft can help create and sign documents. Norn tells the operating system what the signed document now requires.

Market: \$10B and growing 8–10% CAGR, with the SMB tier underserved

Manufacturing ERP is a large, established market where mid-market manufacturers (10–500 employees) are systematically failed by incumbents. We sell into that gap.

TAM — Global manufacturing ERP

- \$10B+ market in 2024
- 8–10% CAGR through end of decade
- Full ERP market \$281B by 2034 (Fortune)
- Digital transformation + Industry 4.0 tailwinds

SAM — Mid-market manufacturing

- 10–500 employee shops, US + EU
- ~30–40% of revenue, ~80% of customers
- Concentrated in discrete + mixed-mode
- AS9100, CMMC, ISO, ITAR regulated

SOM — PA + adjacent reachable in 36 months

- ~3,500 qualifying manufacturers in PA / OH / MD / NJ / NY
- Target: 50–150 paying customers by Year 5
- Wedge via Ratatosk workshops; convert ~30% to platform
- PA-grown, MANTEC-aligned, US-hosted

Mid-market manufacturers pay \$45K–\$250K/yr to incumbents (Epicor, Sage, Infor) for systems they actively distrust. Same budget, better product.

Initial market: regulated operations with visible authority pain

Ratatosk sells into the moment when migration, compliance, integration, or AI makes ambiguity expensive.

Defense-adjacent manufacturing

CMMC, CUI, audit traceability

PA manufacturing corridor

MANTEC member network, MEP, 50–500 employee shops

Aerospace & precision machining

AS9100, first article, quality gates

Implementation partners

SIs, ERP consultants, fractional CIOs

**Near-term wedge: paid Ratatosk diagnostics convert into Yggdrasil Validation Cohort pilots.
PA-grown product for PA-grown manufacturers.**

Business model: services-led proof, platform-led expansion

Ratatosk creates revenue and proprietary insight before full platform displacement is required.

Ratatosk diagnostic	Fixed project fee	Fast proof and artifact generation
Yggdrasil ERP	\$30K + (\$10K × Footprint) annual; \$35K pilot	All 10 modules + OPE included; full audit log
Ragnarok migration	Project fee; 1:1 activation credit	Governed legacy → canonical schema migration
Norn pilot	\$299/mo Business tier	Contract pilot; 5-org cap
Roadmap	Future revenue lines	SI channel, OPE-Norn integration, agent SDK

GTM motion: founder-led pilots → SI/referrer channel → strategic platform conversations.

GTM phasing: services-led wedge, platform-led expansion

Each phase builds the customer relationship and proof set the next phase needs. We do not need to win an ERP buyer in month one.

Phase 1 — Wedge

Norn self-serve SaaS (free → \$1,499/mo). No IT approval, no sales cycle. Active Q4 2026.

Phase 2 — Services

Ratatask governance workshops, \$5–12.5K. Reveals migration needs, builds account intelligence. Q3 2026.

Phase 3 — Platform

Ragnarok migrations + Bifrost integrations. 60% Ratatask → Ragnarok attach, 25% → Bifrost. Q1 2027.

Phase 4 — ERP

Yggdrasil ERP pilots (\$35K) and full subscriptions. Footprint Score pricing. Q3 2027+.

Pre-seed milestones

3–5 Ratatask workshops, 2 Yggdrasil pilots, Wave-1 OPE rollout, SOC 2 Type I, first engineering hire.

Series A milestones

\$500K ARR, 100 Norn paid accounts, 10 services engagements, 3 Yggdrasil tenants, Template Exchange live.

GTM motion: founder-led pilots → SI/referrer channel → strategic platform conversations. No partner channel before product is proven.

Current proof points and near-term milestones

The platform has moved from thesis to architecture to sellable wedge.

Built and shipping (alpha)

Six-tool suite: Yggdrasil ERP (323 tables, 10 modules, Qt + Next.js, 150+ endpoints, OPE governance), Ratatosk, Ragnarok, Bifrost, Jormungandr, Norn. Mimisbrunnr semantic model unifies all six.

OPE shipped May 2026

Policy lifecycle, Named Conditions, Phases, multi-action, extension capture, ~40 routes, 8 Standard Library templates.

Multi-tenant infrastructure

Live VPS: RedPanda event mesh, Cloudflare Tunnel ingress, Caddy proxy, Go mesh-server. CMMC Level 1 attestation complete.

Validated externally

In response to a comment by the founder, Diginomica's Jon Reed publicly endorsed indie AI-native enterprise builders on Raven Intelligence cast, May 2026. Crunchbase top 100k. CAIP-HE alignment documented.

In market

Yggdrasil Validation Cohort waitlist live — \$15K reservation deposit, 1:1 credit against activation. Selecting for fit; not auto-onboarding.

Next milestone: 2–3 paid Ratatosk workshops, first Yggdrasil pilot conversion, SOC 2 Type I readiness, first engineering hire.

Differentiation: not another layer above the mess

Most adjacent tools observe, move, or interpret data. Mimir Labs governs what can become operational truth.

MDM / governance

Manages definitions and stewardship

Often stops before runtime action authority

iPaaS / data fabric

Moves and reconciles data

Translation is not agreement

Knowledge graphs / semantic layers

Models relationships and meaning

Usually downstream of operational ambiguity

AI copilots / agents

Retrieve and act through tools

Context is not authority

Traditional ERP

Records transactions and configurations

Business rules often live around the substrate

Moat: canonical manifests + deterministic enforcement + audit replay + operational state-machine authority.

Team: solo founder today, AI-augmented build, lean hire plan

Mimir Labs is one person and a deliberate development model. The platform exists because the founder lived inside the failures the doctrine refuses.

Christopher "Doc" Gaither, Founder

- 15 years in manufacturing operations — shop floor, planning, fighting legacy ERPs
- United States Marine — disciplined process, mission-first
- Mechanical engineer — systems thinking, tolerance reasoning
- Solo C++ / Qt / TypeScript builder; AI-augmented velocity
- Located in South Central Pennsylvania; available to operators in person

Hiring plan (post-funding)

- Q3 2026: Sr. Backend Engineer (Bifrost CDC, Mimirbrunnr schema)
- Q4 2026: Sr. Frontend Engineer (Norn web, self-serve onboarding)
- Q1–Q2 2027: Sales / BD Lead + Customer Success
- Year 3 target: 7 FTE; Year 5 target: 22 FTE

The architecture, the doctrine, the manifests, the code — all real and reviewable. Bus-factor risk is named and addressed by the first hire, not deflected.

5-year projections: \$241K → \$17.6M, cash-flow positive Year 2

Five revenue lines (Norn SaaS / Ratatosk / Ragnarok / Bifrost / Yggdrasil) with services-led ramp and SaaS-dominant mix by Year 5.

Year 1 — Foundation \$241K total revenue. Solo founder. 3 Yggdrasil pilots, 4 Ratatosk workshops, 1 Ragnarok migration, Norn launches. Net (-\$23K).

Year 2 — First hires \$1.14M revenue. 3 FTE. 12 Ratatosk, 6 Ragnarok, first Bifrost subscribers, 4 Yggdrasil pilots. Cash-flow positive (\$168K net).

Year 3 — Platform proves out \$3.62M revenue (\$2.36M ARR, 65% recurring). 7 FTE. 28 Ratatosk, 16 Ragnarok, 13 Yggdrasil tenants, Audit Authority attach begins. \$1.43M net.

Year 4 — Scale \$8.67M revenue (\$6.18M ARR, 71% recurring). 14 FTE. Yggdrasil pilots ramp to 25, Bifrost to 31 subscribers, Norn at \$2.6M. \$4.76M net.

Year 5 — SaaS-dominant \$17.6M revenue (\$13.4M ARR, 76% recurring). 22 FTE. 53 Yggdrasil tenants, 2,000 Norn paid accounts, \$700K revenue/employee. \$11.4M net.

Implied Year-5 valuation: \$50–90M on 5–8x ARR multiple. Series A target: Q4 2027 at \$500K ARR + 3 Yggdrasil tenants.

The ask: fund the first commercial proof of the authority-layer thesis

Use of funds is intentionally narrow: pilots, product hardening, and partner-ready delivery.

Raise target

\$1.0M strategic pre-seed / seed

Flexible structure: priced equity, SAFE, convertible, or BFTP/angel-led tranche.
BFTP-tier proposal: \$150–350K (detailed allocation in companion talking-points doc).

12-month goals

- 3–5 paid Ratatosk workshops
- First 2 Yggdrasil Validation Cohort pilots
- Wave-1 OPE rollout (Finance / Quality / Purchasing)
- SOC 2 Type I + first engineering hire

Use of funds

- First engineering hire (founder to BD + delivery)
- Pilot delivery + SOC 2 readiness
- PA manufacturing outbound (MANTEC, trade shows, digital)
- Founder bridge (\$4K/mo) + operating reserve

Mimir Labs has already built the reference implementation. This raise funds the first commercial proof — not the architecture, the customers.
